DETAILED ACTION

Election/Restrictions

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - Claims 1, 2, and 6, drawn to a pair of ladder-like structures having a hinge joint and a tunnel formed therebetween, classified in class 313, subclass 326.
 - II. Claim 3, drawn to a Klystron device, classified in class 315, subclass 111.81.
 - III. Claim 4, drawn to a method for fabricating a ladder-type device, classified in class 438, subclass 689.
 - IV. Claim 5, drawn to a focusing cavity-forming structure, classified in class313, subclass 361.1.
- 2. Inventions II and I, IV are related as combination and subcombination.

 Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination (group II) as claimed does not require the particulars of the subcombination (group I) as claimed because the combination does not require a hinge portion resulting in an elongated tunnel. And the combination (group II) as claimed does not require the particulars of the

Application/Control Number: 10/775,266 Page 3

Art Unit: 2821

subcombination (group IV) as claimed because the combination does not require electrostatic focusing of an electron beam. The subcombination (group I) has separate utility such as in a plasma generating apparatus or laser resonator. And the subcombination (group IV) has separate utility such as in a CRT, display, or deflecting circuit.

- 3. Inventions I and IV are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention IV has separate utility such as in a CRT, display device, or deflecting circuit. See MPEP § 806.05(d).
- 4. Inventions III and I, II, IV are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, the product as claimed can be made by another and materially different process, such as ion implantation. Furthermore, the process as claimed can be used to make materially different products, such as a variety of integrated circuit components.

5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Communication Information

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Leith A. Al-Nazer whose telephone number is 571-272-1938. The examiner can normally be reached on Monday-Friday, 7:30-4:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Don Wong can be reached on 571-272-1834. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
